Brew Day Checklist for All Grain Recipes

Complete Recipe Builder: www.brewersfriend.com/homebrew

	Brewer:	Bert Timmerman	Brew Date:	October 17, 2020	
	Recipe Name:	04 SMaSH Fuggle	Beer Type:	12A British Golden Ale	
Set	up and Mash				
V	Double check all ingredients are on hand for recipe, including prepared yeast starter if applicable.				
V	Plan out mash schedule. http://www.brewersfriend.com/mash				
	Begin heating strik	e water in hot liquor tank (HLT) or se	condary kettle.		
	Add brewing salts as recipe calls for or to style. http://www.brewersfriend.com/water-chemistry/				
	Weigh out and mill grains.				
	Setup mash tun and kettle and ensure they are clean.				
	Make sure valves are closed on mash tun and brew kettle.				
	When strike water is ready, pre-heat tun, begin dough-in procedure and mash.				
	Monitor mash temperature during mash and adjust as necessary.				
	Start heating water for next infusion or sprage.				
	Take yeast out of fridge if using liquid ale yeast.				
Sn.	argo and Boil				
	parge and Boil				
	Add sparge water to mash, wait 20 minutes, then drain to kettle.				
	Take a gravity read	•			
	Fire the kettle and	ak occurs to avoid boil over. Start tim		collected.	
Ц			iei when boll starts.		
		ngredients / hops as recipe calls for:		O with	
		tion: 8 gram Fuggle + 0,15 gram Lipo	phop K (60 min)	@ time <u>0 min</u>	
	Hops / Kettle Addit	tion: 4 gram Fuggle (30 min)		@ time 30 min	
	Hops / Kettle Addit	tion: 4 gram Fuggle (15 min)		@ time <u>45 min</u>	
	Hops / Kettle Addit	tion: 1 gram Irish Moss + 0.05 gram S	Servomyces (10 min)	@ time 50 min	
	Hops / Kettle Addit	tion:		@ time	
	With 10 minutes left, submerge wort chiller (if using immersion chiller).				
Fin	al Steps				
	Sanitize lid of kettle	e.			
	Flame out.				
	Add any final hop a	additions or kettle ingredients.			

Fin	al Steps (continued)					
	Set lid on kettle, activate wort chiller.					
	Begin sanitizing primary fermenter, cork, air lock, aeration stone/hose, funnel, wine thief.					
	When wort is cooled to ~70F / 21C, transfer wort into fermenter.					
	Aerate wort with aeration stone (or aerate by shaking, rocking, stirring))				
	Take hydrometer sample, record the value.	Original Gravity:				
	Pitch yeast.	Wort Collected:				
	Fit with airlock or blow off tube for high gravity or dark beers.					
	Move fermenter to temperature stable area protected from light.					
	Clean up equipment.					
Racking – optional or as called for (usually after about 7-10 days)						
	Move fermenter up to a table, let sediment settle.					
	Sanitize racking cane, hose, secondary fermenter.					
	Set secondary fermenter on the floor below the primary.					
	Carefully rack beer into fermenter, save a sample for tasting and hydrometer sample.					
	Add finings, dry hops, etc.					
	Fit with airlock.					
Bot	ttling – when fermentation is complete (2-3 weeks for Al	(e)				
	Optional – 'cold crash' for a day or two by putting fermenter into a fridge set as low as 34F (1 C).					
	Determine how many and what type of bottles to use. http://w	www.brewersfriend.com/bottling-calculator				
	Make sure you have enough crowns (caps) on hand.					
	Move fermenter up to a table, let sediment settle.					
	Begin sanitizing bottles.					
	Prepare priming sugar by dissolving in warm / boiled water and let cool.					
	Sanitize racking cane, hose, bottling bucket and spoon.					
	Carefully rack beer into bottling bucket, save a sample for tasting and hydrometer sample.					
	Add priming sugar solution, mix without splashing.					
	Siphon beer into bottles.	Final Gravity:				
	Cap and mark bottles.					
Ke	gging – optional approach instead of bottling (easier)					
	Move fermenter up to a table, let sediment settle.					
	Sanitize keg.					
	Rack beer straight into keg, add priming sugar or force carbonate.					
Dri	nking your beer!					
	Wait about 2 weeks and try some, note carbonation levels, flavor profile.
